π (Ma–Li–Lü, orden 1)
$3\pi/4$ (asíntota $s \to \infty$)
$\pi\, m'(s)$ del aproximante global
solver directo a $T = 0$: $\mu'(y)$ por diferenciación implícita
manuscrito: Ψ_{ext} (barra = envolvente de ajustes)
mínimo
$\partial M_{\mathrm{ext}}/\partial\alpha|_J$
$y = \alpha/J^{2/3}$
